

How To Care For Your

KUMITA Carry Pouch

Do these first!

- *Please choose a sunny and dry day to wash.
- *Remove all attachments.
- *Colors may run. Wash separately.

Remove the strap!

1 Prepare the detergent

Prepare lukewarm water or cold water with diluted neutral detergent in a wash tub.

[Get these ready]

2 Washing

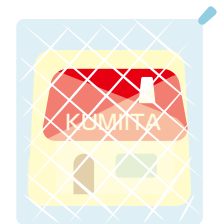

Put the carry pouch into the diluted neutral detergent water and gently rub to wash. Be careful here to keep the pouch shape. To keep the pouch exterior soft: After washing, dip the pouch in the lukewarm water with diluted fabric softener to keep its softness.

3 Rinsing

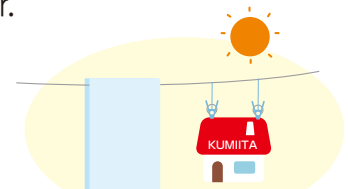

Once you have washed the pouch clean, rinse thoroughly. If not properly rinsed out, remaining detergent and softener will cause mold or odors to form. After rinsing, press with a big towel to squeeze out excess water.

You may also use the delicate spin-dry cycle of your washing machine: wrap pouch in a big towel and put in a snug fitting laundry net bag before putting into machine. If you are concerned about the pouch losing shape during the spin-dry cycle, we recommend the towel press method to remove the excess water.

Wrap in a towel and use a laundry net bag!

Once you have removed the excess water, fix the pouch shape and dry it in a breezy and airy place. Make sure to dry completely. Keeping pouch in direct sunlight for a short time is not a problem, but prolonged exposure will lead to color fading and deterioration, so please be careful.

Dry in a breezy and airy place on a sunny day.

Caution

- *If not properly rinsed out and dried, mold will form.
- *The fabric or seams may come apart if the pouch is old or if the stitching is coming loose. In such cases, please take product to a professional cleaner. We will not assume any responsibility should the product deteriorate or become damaged due to the care procedures noted here. Please check the condition of the pouch before washing.

Disclaimer

In general, the pouch may change shape to some extent if washed whole. If you are worried about this, please take to a professional cleaner. Claims of deformation after washing is not be recognized. Do all at your own risk.
