

# How To Care For Your

# KUMITA Carry Pouch

## Do these first!

- \*Make sure the weather is pleasant and dry before washing.
- \*Remove all attachments.
- \*Colors may run. Wash separately.

Remove the strap!

## 1 Prepare the detergent

Dilute a small amount of neutral detergent in lukewarm or cold water.

【Get these ready】

Neutral detergent

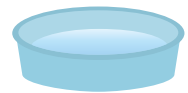

Lukewarm or cold water

Dilute neutral detergent in water.

All set!

## 2 Washing

Put the carry pouch into the diluted neutral detergent water and gently rub to wash. Be careful here that the cotton lining inside does not wad up. To keep the pouch exterior soft: Dilute a small amount of fabric softener in lukewarm water. After washing, dip pouch a few times.

## 3 Rinsing

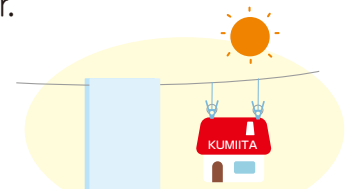

Once you have washed the pouch clean, rinse thoroughly. If not properly rinsed out, remaining detergent and softener will cause mold or odors to form. After rinsing, press with a big towel to squeeze out excess water.

You may also use the delicate spin-dry cycle of your washing machine: wrap pouch in a big towel and put in a snug fitting laundry net bag before putting into machine. If you are concerned about the pouch losing shape during the spin-dry cycle, we recommend the towel press method to remove the excess water.

Wrap in a towel and use a laundry net bag!

Once you have removed the excess water, fix the pouch shape and hang in a nice, breezy location. Make sure to dry completely. Keeping pouch in direct sunlight for a short time will not present a problem, but prolonged exposure will lead to color fading and deterioration, so please be careful.

Hang out on a nice day in a breezy location.

## Caution

- \*If not properly rinsed out and dried, mold will form.
- \*The fabric or seams may come apart if the pouch is old or if the stitching is coming loose. In such cases, please take product to a professional cleaner. We will not assume any responsibility should the product deteriorate or become damaged due to the care procedures noted here. Please check the condition of the pouch before washing.

## Disclaimer

In general, washing the pouch whole will cause the cotton lining to wad which will cause a certain amount of deformation. If you are worried about this, please take to a professional cleaner. Claims of deformation from washing will not be recognized. Use at your own risk.
